

The Office of Campus and Community Relations

Since 2001, visitors to the Rutgers-Newark campus have been able to go to one central location to get information about buildings, phone numbers, services, special events and other pertinent information about the campus. The Campus Information and Conference Services (CICS) office was created to assist with providing quality customer service to the campus community and to off-campus inquirers and visitors from its information booth in the Paul Robeson Campus Center.

In 2005, CICS was renamed the Office of Campus and Community Relations (OCCR). The name OCCR reflects more accurately the department's increasing involvement in university-community partnership and outreach activities. OCCR has refined its mission to encompass three primary management units: Campus Information, Conference Services, and Community Outreach

The Rutgers Memory Disorders Project

The Memory Disorders Project at Rutgers-Newark is devoted to studying how the human brain creates and stores memories. Our aim is to promote increased understanding of human memory and memory impairing disorders. We are neuroscientists, psychologists, and other researchers conducting a wide range of research. Our goals include developing more accurate diagnostic tools for memory disorders, understanding how memory is disrupted in various types of disorders, and understanding the roles of specific brain structures in memory.
